

SQL Lab

MySQL + TiDB
优化实战案例集

102 个案例

8 大场景

Docker 复现

MySQL 5.7 & 8.0

TiDB v7.5

李强

目 录

项目介绍

快速开始

如何阅读案例

一、索引设计与失效

- 01 deep pagination
 - 02 leftmost prefix
 - 03 implicit type conversion
 - 04 function on index
 - 05 like leading wildcard
 - 06 or condition
 - 07 range after index
 - 08 covering index
 - 09 index condition pushdown
 - 10 redundant index cleanup
 - 11 prefix index
 - 12 index selectivity
 - 13 invisible index
 - 14 auto increment gap
 - 15 index merge pitfall
 - 16 skip scan
 - 17 cursor pagination
 - 18 fulltext search
-

二、查询改写

- 19 subquery to join
 - 20 count optimization
 - 21 group by filesort
 - 22 large in list
 - 23 exists vs in
 - 24 distinct optimization
 - 25 not in vs left join
 - 26 union vs union all
-

- 27 orderby limit no index
- 28 having to where
- 29 limit1 exists
- 30 timestamp vs datetime
- 31 time format antipattern
- 32 sql antipatterns

三、JOIN 优化

- 33 small drive large
- 34 driven no index
- 35 hash join vs bnl
- 36 join order
- 37 self join optimization
- 38 join group by optimization
- 39 derived table materialization
- 40 straight join
- 41 left join to inner

四、DDL 与大表

- 42 online ddl
- 43 text blob pitfall
- 44 batch delete
- 45 partition range
- 46 batch insert optimization
- 47 optimize table fragmentation
- 48 instant add column
- 49 modify column type
- 50 vertical split text
- 51 field type best practice

五、架构级优化

- 52 dynamic filter
- 53 summary table
- 54 hot cold separation
- 55 flash sale stock
- 56 read write splitting
- 57 json column pattern
- 58 soft delete pattern
- 59 sharding route

- 60 cache penetration
- 61 auto inc exhaustion
- 62 connection pool exhaustion

六、事务与锁

- 63 deadlock analysis
- 64 gap lock insert block
- 65 select for update scope
- 66 optimistic vs pessimistic lock
- 67 phantom read
- 68 deadlock retry timeout
- 69 unique index concurrent insert
- 70 long transaction harm
- 71 rc vs rr isolation

七、优化器与 8.0 新特性

- 72 descending index
- 73 functional index
- 74 histogram statistics
- 75 cte recursive
- 76 window function
- 77 optimizer hint
- 78 derived condition pushdown
- 79 batch update
- 80 slow query diagnosis

八、TiDB 分布式优化

- 81 tidb explain tree
- 82 coprocessor pushdown
- 83 auto random
- 84 tidb statistics
- 85 tidb transaction
- 86 index lookup
- 87 tiflash mpp
- 88 tidb gc
- 89 follower read
- 90 tidb memory oom
- 91 tidb join algorithms
- 92 tidb online ddl

93	tidb plan cache
94	tidb stale read
95	region hotspot
96	sql binding
97	tidb partition
98	tidb dashboard
99	tidb lock deep
100	tidb sequence
101	tidb cte
102	tidb cost hint
